

# Photography workshop for beginners

Sounds familiar?

There you've bought a wonderful digital camera, maybe even a winner in the tests, with twenty billion pixels, and still your photo's don't quite look like it.

Whether compact- or digital mirror reflex camera: in this workshop you'll learn, by deliberate image composition, well chosen perspective and using the right settings on your camera, how to make simply better photographs.

Another target is, to get familiarize yourself with your own manual settings, to enhance your creativity in taking photographs.

After a bit of introductive theory, you will start making pictures. During this time you will get "how to" and "problem solving" tips. As completion we will view the photographs on a laptop and discuss them.

---

Time: 2 - 3 hours

Number of participants: min. 3, max. 6 people

Price per person: 25,- € (to be paid with registration/application)

Please bring: camera (evtl. accessories), pen, paper *-and a good mood! :-)*

---

## **Important:**

Your camera needs to have manual setting options!

While there's not enough time to work through the menu of every individual camera, you have to be familiar with the basic functions/settings of your own camera! ( for example: where do i find ISO/aperture value/etc.)

To check before the workshop:

Is the memorycard empty, or rather, is there enough room on there? (if necessary bring spare card)  
Is the battery fully loaded? (if necessary bring extra battery)

**I'm looking forward to see you!**
